

Soma's SACRED SOIL™

Organic Super Soil Mix upgrades your soil, ensuring you of strong vegetative growth and heavy luscious flowers. Without the need for extra added nutrients or fancy growth boosters - just watering your crop is enough.

Happy is He Who Hath the Power to Gather Wisdom From a Flower

Phase	Vegetative Phase (18-6)			Flowering Phase (12-12)						Harvest Time		
Week	1	2	3	4	5	6	7	8	9	10	11	12

Germinate seeds & pre-grow your plant in a light soil mix - **do not plant in super soil mix yet.**

Prepare your Super Soil Mix using the steps provided on the Super Soil Mix Packaging.

in **week 4** it is time to plant your young plant into the now fully prepared Super Soil Mix.

Transplant into your Super Soil mix. Add Mycorrhiza to planting hole and water with compost tea once.

Water to the need of your crop + Add Optional Guano to Tea <small>(2 teaspoons per Liter)</small>	Water to the need of your crop + Double the amount of Mollasses in the tea		Water to the need of your crop + Compost tea 1x per week	Water to the need of your crop + Compost tea 1x per week	Water to the need of your crop + Compost tea 1x per week
	Compost tea 1x per week	Compost tea 1x per week			

No Need to Flush

Soma Says; when you think its ready... wait a week.

I need to VEG longer then 3 weeks?

Soma's Sacred Super Soil Mix works best in 25 liter pots. This size container will ensure that your plants have enough nutrients available until harvest time, while just adding water and a weekly tea. If you need to Veg for a longer period, for example when growing outdoors, we recommend to gradually increase the size of your pots over time and to add fresh Soma's Sacred Super Soil Mix to your pots with every transplant until the desired size of pot is reached. To ensure your plants are not stressed to much during transplanting add Soma's Sacred Mycorrhiza to every new potting hole.

Chlorine Free Water

To keep all beneficial microbes and bacteria alive and kicking make sure to never use chlorinated water. Let your water sit for 24 hours so the chlorine can naturally evaporate and the water is now safe for use on your super soil and plants.
